- DUAL RELAYS, MAX/MIN INFORMATION
- USER-SET DISPLAY MESSAGING
- 3600 POINT LOGGER (USB or COMPATIBLE ANDROID DEVICE)

## > INTRODUCTION

The DM670PM series of battery powered indicators accept gauge or absolute pressure and displays the sensor pressure in BAR, PSI or the user's engineering unit on a 6-digit LCD display. The instrument offers an advanced display mode allowing the user to also display one or two (1 to 32) character messages. Additional to the messages, the user may select an alert-event to occur when the pressure is within a band. The two change-over relays can be used together with the messaging and alerts to provide switching at user-set points. In addition to this, on-board datalogging is also available to record process details at up to 3600 points.

## **FEATURE HIGHLIGHTS**

## **DUAL RELAYS**

The instrument is equipped with dual volt-free changeover-type relays, operating independently. The user may select one of seven actions, including deviation, latched or non-latched operation, with fully adjustable set point and dead-band. The Relays may be turned off if not required to extend battery life. An option is provided to trigger an alert-event when a relay contact is on.

### **DATA LOGGING FUNCTION**

DM670PM also provides a powerful data logging function. The log points can be set up to 3600 points, each point is time and date-stamped together with process value, temperature and relay state information.

The log rate is selectable in steps. The start of log can be delayed if required. Either fixed or rolling logs may be performed.

Two methods of reading the log are available. The USB configuration reads the log and allows the user to save to a text file for export to other programmes. While the NFC android interface allows data transfer to compatible android phones or tablets, by using the downloadable App the data can be graphed and forwarded by email, Bluetooth etc. The NFC interface is also capable of starting a new log with different log period and modes.

### **CALIBRATION/USER-LINEARISATION**

5-point calibration can be applied using the USBSpeedLink software.

As well as straight line interpolation, up to 22 points (x,y) of user-linearization are available for creating custom curves and corrections.

#### **REAL-TIME CLOCK**

Date and time-stamped maximum, minimum and average temperature values as well as relay on and relay off data is recorded and can be displayed along with the current time and date. The real-time clock is also used to record the data logged points.

GENERAL	
Function	Description
Update rate	1 or 5 seconds
Relay response time	< 10 seconds
Battery	1 x (AA 3.6 V lithium)
Battery life	1 year minimum @20°C (longer depending on options selected)
Clock accuracy	±2 seconds per month typically

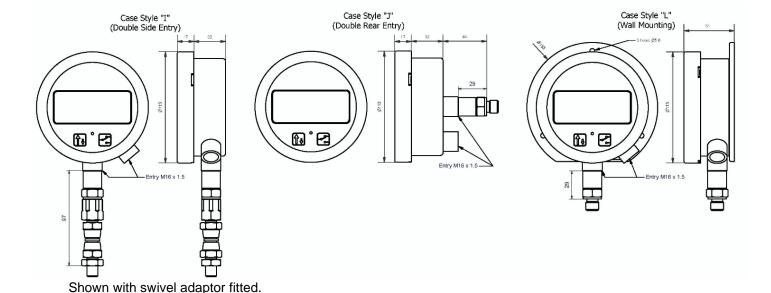

ENVIRONMENTAL	
Function	Description
Ambient housing temperature	Operating/storage (-30 to 70)°C
Ambient sensor temperature	Operating (-40 to 110)°C
Ambient humidity	Operating/storage (10 to 90) %RH non-condensing
Protection	IP65, cable entry must be sealed to IP65
USB configuration ambient	(10 to 30)°C

CONNECTIONS	
Sensor to process	1/4 inch BSP male with adaptor options (see accessories)
Output relays	2 x Two-part screw connectors
USB connection	USB mini B port

MECHANICAL		
Enclosure (case)	Stainless steel, side or base mount options	
Case entry	1 x M16 female thread, blanking plug supplied	
Front bezel diameter	113 mm	
Weight (approximate)	520 g	
Material in contact with media	Stainless steel 316L	
O-ring	Viton
