

Kromschröder IC + Valve Assemblies

The actuators are designed for all applications that require precise, controlled rotary movement between 0° and 90°.

Overview

The actuators are designed for all applications that require precise, controlled rotary movement between 0° and 90°. In conjunction with a control element, they are suitable for regulating flow rates on gas and air appliances for modulating or stage-controlled combustion processes.

Features & Benefits:

IC 20

- Can be mounted directly onto the butterfly valves BVG, BVGF, BVA, BVAF, BVH or BVHS
- The combination is designed for control ratios up to 10:1

IC 30

- Can be used as an actuator for linear flow control VFC
- This combination is designed for a control ratio of up to 25:1

IC 40

- Can be mounted directly onto the butterfly valves BVG, BVGF, BVA, BVAF, BVH, BVHS or linear flow control VFC in order to control the gas and air flow rates on gas burners
- Can be used on continuously-controlled burners and on stage-controlled burners

IC 50

- Designed for applications with high torques of up to 30 Nm
- Actuator IC 50 and butterfly valve DKR are delivered ready assembled up to nominal size 300
