## > INTRODUCTION

The SEM210 is a universal transmitter that accepts RTD, Thermocouple, Potentiometer or millivolt input signals and converts them to the industry standard (4 to 20) mA transmission signal.

The SEM210 is programmed using a standard USB lead. The ATEX / IECEx version (SEM210X) is programmed with a ATEX / IECEx approved communication lead (USBX Config).

Both versions use our free configuration software USBSpeedlink downloaded from our web site.

## > ENHANCED FEATURES

Some of the enhanced SEM210 features are as follows;

### SENSOR REFERENCING

The SEM210 sensor referencing via the Windows based USBSpeedlink software allows for close matching to a known reference sensor eliminating possible sensor errors.

### USER CALIBRATION

In addition to sensor referencing, user offset and current output trimming is possible via the USB.

### CUSTOM LINEARISATION

The SEM210 can be programmed with a custom linearization to suit nonstandard sensors or sensors with unusual or unique characteristics. Consult the sales office for details.

### SENSOR BURN OUT DETECTION

If a sensor wire is broken or becomes disconnected the SEM210 output will automatically go to its user defined level (upscale or downscale) or a pre-set value.

### OUTPUT CURRENT PRESET

For ease of system calibration and commissioning the output can be set to a pre-defined level anywhere within the (4 to 20) mA range.
