> ## INTRODUCTION

The SEM1600T accepts temperature or mV and resistive type inputs. The flexible design allows the use of any resistive sensor within the range of (10 to 10500) Ω. Including Pt100, 500, 1000, Ni or Cu sensors, as well as thermistor sensors, and multiple different thermocouple types, slide wire sensors up to 100 KΩ and direct resistances.

Flexible output configuration offers active or passive mA and bi-polar voltage ranges.

For ease of use, a high-efficiency switch-mode power supply is fitted as standard and does not require any adjustment between ac or dc applications. Operating voltages are (10 to 48) VDC and (10 to 32) VAC.

The free USBSpeedLink programming software offers two programming modes for the SEM1600T: temperature and process. These modes enable the user to configure the product exactly to requirements.

USB PC CONFIGURATION
The SEM1600T is quick and easy to configure using a standard-type USB lead and the free-of-charge USBSpeedLink Windows software.

USB ANDROID VIEW The SEM1600T can be connected to an Android phone or tablet using an OTG USB adaptor. Running a free App, the Android device can then be used to view live data from the SEM1600T

> ## FEATURE HIGHLIGHTS

**TEMPERATURE MODE** For use with RTD, thermistor, and thermocouple sensors, the SEM1600T has an isolated input and can be programmed in either °C or °F. The SEM1600T sensor-referencing feature allows for close matching to a known reference sensor, eliminating possible sensor errors.

PROCESS MODE The SEM1600T is for use with slide-wire sensors and can also accept mV and resistance inputs. A 22 segment user linearisation table allows for profiling of the input signal for sensors that do not have a "straight line "input to output relationship.

SENSOR LIBRARY The USBSpeedLink software will load each temperature sensor profile to the unit as required. The software library includes all common RTD and thermocouple sensors. The library also includes thermistor sensors, PTC and NTC types; if a required sensor type is not currently in the library, it is possible to create the profile and add it to the library for selection (contact sales@status.co.uk for details).

USB PC CONFIGURATION The SEM1600T does not need to be wired to a power supply during the configuration process; it is powered (for programming only) via the USB interface from a PC.

SIGNAL RETRANSMISSION SCALING The input signal range for retransmission can be selected from any part of the maximum input capability. The output signal range can be selected from any part of the total output capability, for example (0 to 50) °C input to (1 to 5) mA output.

GENERAL	
Function	**Description**
Update time	300 ms
Response time	400 ms
Start-up time	5 s (output condition lags)
Warm-up time	120 s until full accuracy
Galvanic isolation	Three way (input, output, supply) 500 VDC
Default configuration	PT100 (0 to 100)°C = (4 to 20) mA, high burnout, no filter, no offset
State LED	Red = fault, green = OK, input and output condition monitored
Supply range	(10 to 32) VAC rms, (10 to 48) VDC SELV
Power	< 1 W @ full output current
Protection	Internal resettable fuse (0.5 A) + over-voltage protection

MECHANICAL	
Function	**Description**
Dimensions	17.5 mm width, 56.4 mm depth from rail, 90 mm height
Enclosure	DIN rail mount
Material	Polymide 6.6 self-extinguishing: Grey
Connections	Screw terminals 2.5 mm wire maximum
Weight	55 g approximate

| ENVIRONMENTAL	
Function	**Description**
Ambient temperature	Operating/Storage (-30 to 70) °C
Ambient Humidity	Operating/Storage (10 to 90) %RH non-condensing
Protection requirement	Device must be installed in an enclosure offering =>IP64 Protection
